

SI Figure 1: Difference in Means Robustness Check

Note: Each dot presents the percentage supporting increased science spending in the treatment or control group. I-bars illustrate 95% confidence intervals around each sample mean. A simple difference in means analysis shows that support for increased science spending was significantly greater in the correction treatment group than in the control group, across partisan subgroups.

SI Table 1: Sample Demographics

	2014 CCES	2010 GSS	U.S. Census
<i>Demographics</i>			
White	73%	77%	78%
Female	53%	57%	51%
% College degree	36%	31%	28%
Median age	53 years	49 years	37 years
Christian	63%	78%	71%
Catholic	23%	23%	21%
<i>Political Characteristics</i>			
Republican	32%	34%	
Democrat	47%	48%	
Ideology (% moderates)	33%	37%	

Note: Partisan variables include those who “lean” toward a political party.

SI Table 2: Multinomial Logit Analyses

	Model 1		Model 2		Model 3		Model 4	
	Increased	Decreased	Increased	Decreased	Increased	Decreased	Increased	Decreased
Estimate Corrected	0.69*** (0.15)	-0.68*** (0.25)	0.80** (0.32)	-0.24 (0.45)	0.94** (0.43)	-0.46 (0.89)	0.45** (0.20)	-0.19 (0.35)
Correction * Republican			-0.37 (0.40)	-0.58 (0.58)				
Correction * Democrat			0.04 (0.39)	-0.85 (0.74)
